

Operating Systems

Java

Handouts

- 1. page of course Fall 99 home page
- Hw 1, part 2
- Schedule

Lecture 1

- Anderson (Berkeley) lecture 1 (Introduction) and 18 (File Systems)
- Solomon (Wisconsin) Introduction, Java
- Discussion of hw 1
- Anderson (Berkeley) lecture 6: mutual exclusion

What do you expect?

- I am quite excited about this particular course: the ability to understand the underlying principles of an operating system puts things in a clearer perspective.
- I hope to be able to understand how the theoretical foundations behind the OS blend with real-world applications and affect the decisions involved in designing those applications. Am I making myself clear?

Add more and more features to a browser

- HTML pages with colors, tables, sounds, movies, etc.
- Idea: include in each page a program that says how to display it.
 - Heterogeneous world of computers
 - Security
- Java virtual machine: “final”, very powerful feature to be added to browsers.
